

fitbit2garmin

Bidirectional converter between Fitbit and Garmin data formats.

After years using Fitbit for activity tracking, heart rate monitoring, sleep analysis, and weight logging, migrating to Garmin means leaving your history behind — unless you bring it with you. This project provides tools to translate your health data across platforms.

Tools

[`fitbit2garmin` →](fitbit2garmin/README.md)

Convert your Fitbit Google Takeout export into TCX and CSV files that Garmin Connect can import. Supports activities (with heart rate), body composition, sleep records, and daily summaries.

[`garmin2fitbit` →](garmin2fitbit/README.md)

Convert Garmin data exports (TCX activities, CSV body/sleep/summaries) into Fitbit's native JSON format — the same structure used by Google Takeout. Useful for archiving or feeding into third-party tools that use the Fitbit Web API.

Sample Data

The `sample/` directory contains representative data for both converters:

```
sample/
├── fitbit2garmin/
│   ├── input/           ↳ Fitbit export (Google Takeout JSON)
│   └── output/          ↳ fitbit2garmin output
└── garmin2fitbit/
    ├── input/           ↳ Garmin export (TCX + CSV)
    └── output/          ↳ garmin2fitbit output
```

Regenerate all sample output:

```
python -m fitbit2garmin sample/fitbit2garmin/input -o sample/fitbit2garmin/output
python -m garmin2fitbit sample/garmin2fitbit/input -o sample/garmin2fitbit/output
```

Project Structure

```

Third-Party Sync Tools

If you want all your data (Fitbit history + Garmin daily data) in one place, these tools bridge the gap:

Tool	Platform	Price	What it syncs to Fitbit	What it syncs to Garmin
Health Sync	Android, iOS	~\$4–6 lifetime (one-time)	Steps, HR, sleep, weight, activities via Google Health APIs	Steps, HR, sleep, weight, activities
RunGap	iOS	\$4.99/quarter or \$14.99/year (Swag Bag)	Activities (workouts) to Fitbit	Activities to Garmin Connect
myFitnessSync	iOS	\$9.99/month or \$59.99/lifetime	Steps, weight, body fat, sleep, water (5 fields)	—
Strava	Web, iOS, Android	Free tier (Summit \$5/mo optional)	—	Auto-sync from Garmin; manual upload from Fitbit

Recommendation: On iOS, **RunGap** + Apple Health gives you a single source of truth. On Android, **Health Sync** with Google Health (Fitbit) serves the same role.

Requires Python 3.10+. No external dependencies.
